(54) OPHTHALMIC SOLUTION CONTAINING
NON-STEROID ANTIHLOGISTIC AGENT AS
MAIN COMPONENT

(57) Abstract:

PURPOSE: To prepare a remedy for ophthalmia giving low irritation to the ocular mucous membrane, in the form of ophthalmic solution, by using ketoprofen or its salt as a main component.

CONSTITUTION: An ophthalmic solution having re-

markably reduced irritativity to the ocular-mucous membrane is prepared by using ketoprofen or its salt as a main component, and preferably adding a basic amino acid (e.g. arginine, lysine, ornithine, histidine, etc.) to the solution. The agent does not exhibit the side effects such as stimulation of gastric mucosa caused by the general administration e.g. oral administration, and gives high local concentration of the active component.
